158 DAYS PAST

207 TO COME

The Case of Surgical Patients—No. 17.

Phlebitis.—Phlebitis is a very distressing complication which usually occurs about the tenth day and involves the femoral or saphenous vein. It is not amenable to treatment other than absolute rest and local heat. The importance of rest of the affected limbs is well known because of the association with embolism.—*Balfour; Mayo Clinic. Med. Record.*

Weather

Warm

Temp.

We washed Maude took
Mella to school & then I went
for her. It rained hard
about four to eight & is
raining now, but the winds
blowing hard. Eugene &
Alta was to Aymer, Alta
came home with Maude
& they was here for dinner
John was drawing gravel
