305 DAYS PAST

60 TO COME

## After the Expulsion of the Parasites,

the Anemia of Hookworm disease should be vigorously combated. Pepto-Mangan (Gude) has been found, by numerous competent observers, to be especially efficient in the prompt correction of the blood impoverishment and general devitalization incident to Hookworm disease.

Weather

Temp.

A fine warm day  
Girls drove to school. John  
was husking corn all the day  
after we got the mangos  
unloaded. Two young helped  
him after dinner. Eugene  
was here for dinner on his  
way home from Aylmer.  
Hook the first corn today
