14 DAYS PAST

351 TO COME

Points on Anesthesia—No. 4.

The condition of the heart should be well looked into before the time of the operation, as conditions are not then at their best. A thorough examination of both radial arteries should be made by the anesthetist, so that he will be better able to judge his patient's condition during and after the operation. It is always advisable to have your subject take a few deep breaths, with mouth closed, to see if there is unobstructed breathing. Where there is obstruction in the nasal passages a mouth prop should be used.—*Hunt; Int. Journ. of Surg.*

Weather

clear

Temp.

I walked down as far as Maude Thompsons, they Boyde drove us out to Mrs Bruchers & we was there all day. Maude came home in the evening. Cecil Laughell drove her home I stayed all night. a
