Buttermilk for Erysipelas.

Arnold recommends buttermilk highly as an application for erysipelas. Whatever the stage of the disease, he says the spread of the infection is immediately checked, the pain disappears, and the whole morbid process rapidly aborts when the milk is used locally. It is easy to apply, cheap, can in itself do no harm, and may therefore be given a trial.—Critic and Guide.

Weather quite moderate all day
but a cold, east wind it
ship tohe took stone
wheat and exchanged it
for hip tundred of place
there graham, & Buckerbert
blow, leat a lag of gram
ulated lugar bandone
thirty time for it. I was one
to have boxes this afternoon
