

In Chorea and Anemia.

Dr. R. W. Miller, Lecturer on Nervous and Mental Diseases and Professor of Theory and Practice of Pharmacy, University College of Medicine, Richmond, Va., states that he is strongly of the opinion that anæmia as an etiologic factor in chorea is worthy of investigation, and in cases where chorea is accompanied by anæmia, **Pepto-Mangan (Gude)** is distinctly indicated and will improve both conditions. Three cases are given in illustration.

Dr. Hermann Metall, assistant physician to the General Polyclinic at Vienna, says:

"The advantage of this preparation (Pepto-Mangan) is that it exerts a stimulating effect upon the blood-forming organs, these being excited to greater functional activity, and that the favorable effect manifests itself even within a short time by an increased oxygenation of the blood. At the same time, this chalybeate, as already mentioned, causes no digestive disturbances and does not injure the teeth."

He reports a number of cases with blood counts which demonstrate the excellence and efficiency of Pepto-Mangan. He adds: "Unpleasant concomitant effects and disagreeable sequelae were never observed during the use of the remedy. Eructations, pressure in the stomach and nausea were never noticed."
