350 DAYS PAST

16 TO COME

Thyroid Enlargement.

The thyroid gland is enlarged at times in infections in different organs of the body, noticeably in syphilis, scarlet fever, tonsillitis, and tuberculosis. This does not mean that the enlargement is due to a specific organism, but may indicate that the increased activity of the gland is due to its effort to eliminate toxic materials.—*Matlack; Therapeutic Gazette.*

Weather

Temp.

Snowed a little very cold this morning, but got warmer through the day. Girls drove to school. Bew! Levey came out & got wheat for Grand Mrs. chickens. I put a lining in laps & old blanket.
