

“Milk Diet” Anemia

Milk, as is well known, is very deficient in iron. After a prolonged milk diet, Anemia is not uncommon, especially after prolonged Typhoid and in Bright's Disease.

Pepto-Mangan (“Gude”)

when given in milk, both during and after a milk diet, satisfactorily supplies the lacking iron element and thus prevents or relieves the resultant Anemia.

In eleven-ounce bottles only.

Never sold in bulk.

Samples and literature upon application.
