64 DAYS PAST

301 TO COME

### Percussion of the Pulmonary Apices—No. 3.

Small disseminated foci of airless tissue can only be found with light percussion; an increase in the force of the stroke in such cases may evoke a normal, or over resonant note. If on increasing the force of the stroke the dulness remains, we may safely conclude that we deal with an extensive area of airless tissue.—Fishberg; *Med. Record.*

Weather

Temp.

Cold & very windy  
Started a sleet & snow  
about three this afternoon  
Leighton drove his barrel  
Colt over & stayed for dinner  
along about noon Alita  
came & stayed until  
about four. In Cox was over  
Eugene stayed home &  
took care of his sick cows  
I was up all day & made  
Billey's pies
