

Convalescence From Pneumonia

The long, weary "pull up-hill" of the weakened convalescent from pneumonia is materially lessened by the administration of

Pepto-Mangan (Gude)

which assists Nature to mount to the crest of the "Hill of Health."

Mental depression, languor, and physical weakness disappear after a few weeks' treatment with this reconstructive tonic and nerve invigorator.

To assure the proper filling of prescriptions, prescribe an original bottle. *Never sold in bulk.*
