281 TO COME

Diseases of the Pleura in Adults.

The amount of fluid may not be large, and especially does this hold in tuberculous involvement, so that the needle may pass through both pleural layers and the fluid be missed in aspiration. It must also be remembered that the needle may pass through two normal layers and secure pus from a liver abscess, lung abscess or kidney pelvis; and this will confuse the surgeon who opens the pleura expecting pus.—Williams; Med. World.

Weather

Temp

Rained a little last night & to day until noon quite hard & snowed & rained a little this afternoon. Pa took Mella to school, after they went to Mr. Bingham's & sold him an old star's little calf. Maudie went for Mella, Joe & I then cleaned the two bedrooms up stairs. Mella got her medicine. Pa was over to night's visiting Mr. Cox
