178 DAYS PAST

187 TO COME

Anal Fissure.

The fissure should be first anesthetized with cocaine, and pure ichthiol applied with a little cotton on a glass rod. For subsequent applications, to be made every other day, cocaine is not usually necessary. The bowels must be kept loose. Cicatrization is very rapid.—*Medical Standard.*

Weather

Temp.

Maudie & I went to Oylmer  
It rained nearly all day only  
while we went to Oylmer.  
John & Eugene went down  
to Mrs Brooks sail but never  
bought anything. Eugene  
went to a reform meeting  
and we had a terrible  
electric storm.
