286 DAYS PAST SATURDAY 80 TO COME

May 14, 1907.

Dr. Wm. H. Ambrose, New Petersburg, Ohio, says:

"I used the sample of Pepto-Mangan in a case of Bright's Disease, and have ordered more for the same patient, and while, of course, it is not curing the disease it is overcoming the weakness and anemia usually so prominent in this disease. Under it the appetite has improved, food has been assimilated, and while I have not made an examination of the blood, I am satisfied it is wonderfully improved. I will continue to prescribe the remedy at all times when indicated."

Carl was out and helped all day. Windy and cold. Mother and Mella went to town. Took my first lesson. Separated the sheep from lambs. Carl had his trial to-day. Culled hens and dug carrots and beets. I was in to Mrs. Blues. Maude made Morris a checker board & painted it.
