103 DAYS PAST

173 TO COME

The Vital Element of the Hemoglobin

is its organic iron. Hemoglobinemia is the blood deficiency especially characteristic of Chlorosis. **Pepto-Mangan (Gude)** supplies the iron and manganese, in quickly absorbable form, to fortify and increase the hemoglobin of the vital fluid. It does this without disturbing digestion, and is, unquestionably, the most agreeable, dependable and generally available preparation with which to accomplish this necessary purpose.

Weather

Temp.

Five in white
Eugene & ~~Delbert~~ was here
all day Del was home
They finished cutting
the south field by the
east barn. Maude was
trying her oxen, I put
the vines as back & went
buying, Della did the work
