245 DAYS PAST

121 TO COME

After the Removal of the Cause.

Long continued pre- or post-operative sepsis leads to anemia, as does also long continued suppuration or post-operative hemorrhage. After the cessation or removal of the operative cause, **Pepto-Mangan (Gude)** can be depended upon as the ideal hematic in the reconstructive treatment of such cases.

Weather

Temp.

We washed this morning. After dinner we took them in. Eugene came over + helped Dr. Pickering operate. Mike got kicked. Eugene killed the little pig. Maud went to town + also up to get her watch on her wheel. Bought pail + dipper. Got a letter. An wheel - 17 miles.
