

Tardy or Rapid Recovery?

After an acute or exhausting illness the patient always inquires: "How soon will I be up and around?" To "boost up," "brace up" and "tone up," no medicinal agent is quite equal to

Peplo-Mangan ("Gade")

It restores appetite and color, vitalizes every function and re-creates strength and vigor of blood and body, after Typhoid, Pneumonia, La Grippe, Malaria, Scarlet Fever, Measles, Diphtheria and other febrile diseases. It builds up the depleted blood after Hemorrhage, Sepsis or Suppuration. It imparts spirits and snap to the Neurasthenic, and renders recovery rapid instead of tardy, after any serious illness.

In 11 oz. bottles only.

Never sold in bulk.
