133 DAYS PAST

233 TO COME

**THE BLOOD CURRENT OF THE AGED.**

General muscular flaccidity, the inevitable consequence of advanced age, is the result of a sluggish blood current. The heart loses its pumping capacity, the arterial walls soften and the blood stream lacks sufficient force to properly circuit the lungs and receive oxygen. **Pepto-Mangan (Gude)** makes the blood rich in hemoglobin and red corpuscles, intensifies its affinity for oxygen and invigorates arterial circulation. It is ready for quick absorption and rapid infusion into the blood and is consequently of marked and certain value in the debility and infirmity of old age.

Was warm for a little while this morning so that the bees was working, then it turned cold, rained, a few drops. The leaverly girls came & took Maude & I for a drive, & we went around by Aylmer & then down to old Mrs. Jones to see their garden & bird houses. It was Mothers day at the Baptist Church.
