Conclusions Concerning Anesthetics.

Chloroform must be discarded as a routine anesthetic. It produces too many immediate and late deaths to warrant its general employment. It is only in the exceptional case, as possibly in laryngectomy where one might feel that the direct introduction of chloroform vapor into the trachea might produce sufficiently less irritation to the tracheal mucosa with less risk of pneumonia, than ether, that we would be warranted in employing it.—Evan; Surg. Gyn. and Obst.

Weather

Warm & fine no rain

Temp.

Maudie her Aunt & I went to Aymer. Maudie got a tooth filled & Ella & I went on down to the cemetery. Guelin stayed with Mella & to night Pa & I went over to Mr. Lopes for a little while, while the girls & Guelin & their Auntie was playing Parcheesa. John sold the Adams case & patients last night. Maudie married today. Mella & her daddy went to Aymer & bought a Polley's Maria's & new sugar
