

Wednesday November 29th
 It turned much colder during the night and froze and ~~thawed~~ snowed a little. Dad did not go back to plow this morning as it was so disagreeable and he did not get an early start but went over in the corner field he plowed first and then the ditches. I sawed a little wood. Gus Smith was over this morning to see Paul Frank Vysalio came over to get Dad to put another bandage on his mule's foot. I cleaned out Letty's old chicken house and knocked a couple of boards up the back of it so the sheep could get in from the orchard on bad nights. I tried to coax them in but did not succeed although they are fairly tame. I went over to the field where Dad was digging mud, for awhile this afternoon and then came up and read till the cows (which we sent back in the galley for a drink) came up and then I did chores and Dad came in. Aunty went over to Mrs. Arthur Balthusky's this afternoon.

April to June

- 15. Life history of the frog. 45-50
- 16. How birds obtain their food, utility etc. 44.
- 17. The nesting of birds.
