"Feeding" Rather Than "Drugging."

Devitalized red cells, from whatever cause, need reparation and reconstruction. The administration of **Pepto-Mangan (Gude)**, regularly and continuously, constitutes a "feeding" rather than a "drugging" process, as it supplies the erythrocytes with the essential vitalizing hematics, iron and manganese, in palatable, tolerable, non-irritant, non-constipating and promptly available form.

Weather

Temp.

Wind
 Snowed quite a little to night, ground is white
 froze hard last night.
 John went to Mr Penhales for his Timothy seed. Charles was here for tea, and is coming to help us a month
 Mella & I washed. Ceas Adams was out and had Mella a new box. Cecil was killed here for horse-dish.
