22 DAYS PAST

343 TO COME

Gynecological Hints.

In a general way secondary operations on the perineum should not be performed until the end of at least two months. If they are performed earlier the lochia are apt to interfere with union. It is not necessary to stop nursing an infant for more than a few hours following operations on the perineum.

After all operations of the perineum the bowels should be kept freely open.—Waldo; Int. Journ. of Surg.

Weather cloudy I took the Temp.

girls to school this morning. brought Mr & Mrs Rogers home with me & they stayed & we visited all day, had a good time, then in the evening about ten John took them home, Eugene went to Aylmer, then came home then drove back & got the girls. Bill 5 miles. Had a letter from Mrs Marchant
