

Post-Typhoidal Anemia

is due to two causes:

1. A prolonged iron-poor milk diet;
2. The prostration incident to continued illness.

Hematinic treatment is urgently needed during convalescence.

Pepto-Mangan ("Gude")

supplies the essential material for blood reconstruction and general revitalization, in palatable, absorbable and assimilable form.

In eleven-ounce bottles only.

Never sold in bulk.

Samples and literature upon application.
