308 TO COME

### The Anemias of Childhood

are usually sequels of the acute diseases common to this period. The action of **Pepto-Mangan (Gude)** is always very marked in these cases, and it is interesting to see how rapidly children respond to its upbuilding influence. A marked increase in hemoglobin at once follows its use and the red cells multiply rapidly. It is best given in milk, the dose, ten drops to two teaspoonfuls, according to age.
