56 DAYS PAST

MONDAY

310 TO COME

Four Common Types of Heart Disease—Nos. 2 and 3.

2. Syphilitic heart-disease.

Here the clinical manifestation is usually aortic regurgitation or aneurism, the characteristic pathologic lesion being syphilitic aortitis. Some cases of myocarditis are likewise syphilitic.

3. Arteriosclerotic heart-disease.

The clinical features are high blood-pressure with more or less marked sclerosis of peripheral arteries, often angina pectoris, signs of enlarged heart and various types of arrhythmia. This type occurs in elderly persons.—Cabot; J. A. M. A.

Weather

Temp.

Foggy all day &
rained this afternoon &
put poured to night
never saw it rain harder
& thundered & lightened
sharp. Girls went to school
Boyde helped John draw
word, I washed. The men
John & Boyde filled a word
check.
